Summary

Software Engineer with hands-on experience at MathCo, focused on building fast and scalable apps using React and TypeScript. Improved build performance by over 80% and worked across the stack with tools like FastAPI to deliver high-impact features. Passionate about clean, optimized frontend experiences and solving real-world problems. I also have interest in gaming and game development, with good knowledge of the field. As a side project, I developed and published a mobile game using Unity on the Google Play Store, which allowed me to explore interactive systems and creative problem-solving from a different angle.

Experience

Software Engineer (Full Stack)

[Mathco](#)

01/2023 – Present (Bangalore, India)

Worked on the product team for Nuclos, an AI-powered platform that streamlines app development using customizable frameworks. Enabled businesses to rapidly build dashboards and data-driven products for real-time performance tracking and KPI monitoring.

- Implemented the admin portal microservice for Nuclos using TypeScript, TanStack Router, Redux, etc. Also migrated older components from JavaScript to TypeScript for better type safety, developer experience, and fewer bugs.
- Created an AG Grid-like grid table implementation with features such as grouping, filtering, sorting, etc. Replaced the existing implementation, which had over 7,000 lines of code, with around 1,000.
- Designed and implemented the complete FastAPI backend architecture, migrating from Flask to FastAPI for improved performance and scalability. Integrated SAML authentication to streamline user login.

Application Development Analyst

[Accenture](#)

02/2021 – 12/2022 (Bangalore, India)

- Developed and maintained internal tools for study record management used by multiple teams in a global pharmaceutical company.
- Adapted Europe-focused application functionalities to meet the needs of U.S. users, enhancing usability and regulatory compliance.
- Migrated a legacy application from vanilla HTML, CSS, and JavaScript to React, improving maintainability, scalability, and user experience

Full Stack Intern

[NeuronWoods Solutions](#)

01/2020 – 12/2020 (Faridabad, India)

- Completed a six-month internship at NeuronWoods, gaining hands-on experience in full-stack development. Later, I worked as a freelance developer for six months at ReactEmo, contributing to web application development and feature enhancements.
- Developed and deployed the full-stack ReactEmo web app using Node.js and React. Handled end-to-end development, integrated emotion and gaze detection ML models, and migrated from GCP to AWS EC2 for better scalability and performance.

Education

[JECRC University](#) (B.Tech CSE)

08/2016 – 06/2020 (Bangalore, India)
